Scale Use Code

The SCALE_USE_CODE attribute enables maps to be produced at different scales with the appropriate amount of detail. Scale use may be specified using the column attribute SCALE_USE_CODE or as part of the dataset name.

SCALE_USE_CODEs and their usage are as follows:

Scale Use Code	Scale ranges	Usage examples
1	1:5 million – 1:3 million	A7 - A5 PDA, Small maps, Web mapping & very small maps
2	1:3 million – 1:2 million	A4 maps of Victoria & Web maps of Victoria
3	1:2 million – 1:1 million	A3 maps of Victoria & Web maps
4	1:1 million - 1: 500,000	A1+ A0 maps of Victoria & Web maps
5	1:500,000 - 1:250,000	Regional maps of Victoria & Web maps

To display the appropriate amount of detail, select the value of the SCALE_USE_CODE that reflects the scale at which the data will be displayed and all the preceding SCALE_USE_CODE values.

For example :

To display a level of detail suited for a 1: 1 million scale map, select "scale use codes" 1, 2 & 3.

To display a level of detail suited for a 1: 250,000 scale map, select "scale use codes" 1, 2, 3, 4 & 5.

The suffix _SU <scale use code value> in a dataset name identifies the minimum scale beyond which the dataset should not be used.

For example :

VMLITE_PUBLIC_LAND_SU3 refers to scale use code 3's scale range - minimum scale use of this dataset is 1: 1 million.

VMLITE_PUBLIC_LAND_SU5 refers to scale use code 5's scale range - minimum scale use of this dataset is 1: 250,000.
